

MITYLITE

Green by Design

MITY product brands build the most durable furniture in the business—producing products that are replaced less often to provide strong return on investment and safeguard valuable resources for generations to come.

We also work hard to make our production friendlier to the environment in the first place.

Our Green Processes

Wood

Along with all our corrugate cardboard, all the wood we use is Certified Wood Reforestry (CFR) as well as Sustainable Forestry Initiative (SFI) certified. Wood scraps left over after production are recycled locally and turned into wood chips for other uses—never reaching a landfill.

Polypropylene

Polypropylene in the MityLite ABS tabletop is a 2nd generation product.

MityLite ABS Plastic

Our MityLite ABS plastic consists of 80% recycled material or “regrind.” Left over ABS scrap material after table top production is also recycled and turned back into usable regrind.

Nylon

Much of the fabric we use in our chairs is made up of Nylon 66. A significant portion of these materials are post-industrial content derived from recycled carpet scraps.

Carbon Steel

Not only is our carbon steel incredibly durable and long lasting, it's also 100% recyclable. Our steel scraps are recycled locally—minimizing waste and unnecessary landfill bulk.

GREENGUARD Certification

The Underwriters Laboratories (UL) GREENGUARD® Certification program is recognized across the globe by sustainable building programs and building codes. Beyond the ABS tables and Mesh One® chairs, the vast majority of furniture MityLite produces is GREENGUARD Certified. Learn more at greenguard.org.
