

Mity-Lite® Table Cross Section

Mity-Lite® tables are lightweight, and built tough.

Cross
Section

Strong

Lightweight

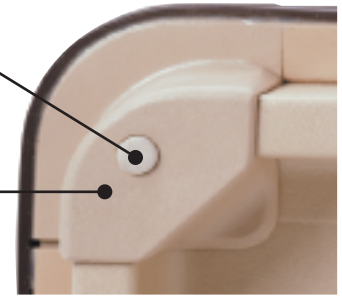

Durable

STAYS IN PLACE.

Replaceable, rubber anti-skid pads keep tables from sliding when stacked.

DURABLE CORNER.

High-impact, injection molded ABS corner designed for shock absorption. The corner withstands a 2-foot corner drop with no structural damage.

STRONG SURFACE.

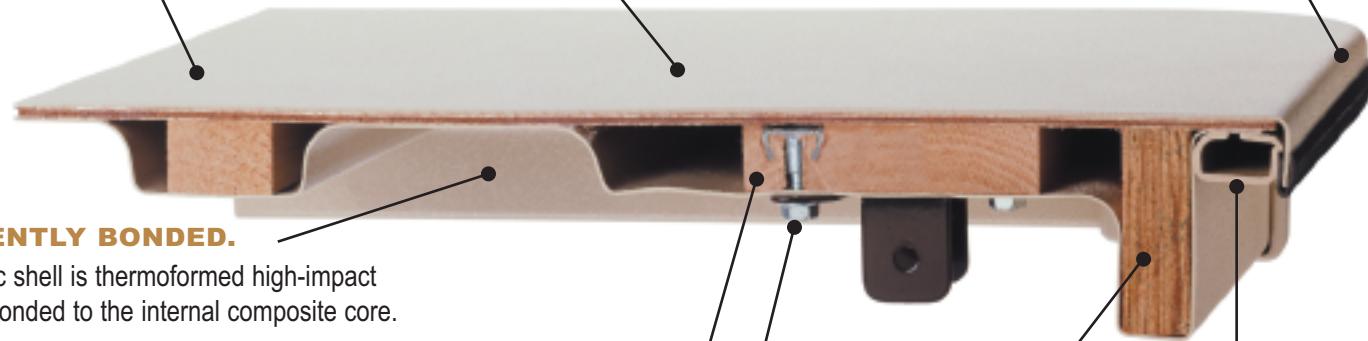

Tabletop is thermoformed, high-impact ABS plastic. Top comes in a variety of textures and color options.

PATENTED SUB-SURFACE.

Composite core provides moderate heat shielding and keeps the surface smooth and flat. Sub-surface is 100% bonded to the top plastic sheet.

TRIM.

Trim extrusion is chemically welded to the entire perimeter of the table, bonding the edge of the top shell of plastic to the bottom.

PERMANENTLY BONDED.

Bottom plastic shell is thermoformed high-impact ABS plastic bonded to the internal composite core.

HARDWOOD STRENGTH & STABILITY.

Inner hardwood leg support members fastened together with 1-5/8" hardened wood screws consist of alder for strength and performance.

SECURE LEGS.

All 16 gauge steel leg brackets are secured metal-to-metal with hex-head bolts into steel T-nut fasteners. Each T-nut fastener is secured into the wood frame cross members from the top side and has at least four anti-spin prongs each. If necessary, legs can be easily replaced.

DURABLE EDGE.

ABS internal rectangular extrusion creates a moisture resistant multi-walled edge that supports top and bottom ABS shells for added durability and edge impact strength.

SUPPORTS HEAVY LOADS.

Laminated 3/4" thick, end piece connects to engineered LVL wood runner which helps provide the strength to support an evenly distributed load of 1600 lbs. without collapse or permanent deformation. Yet a 30" X 72" table weighs only 41 lbs.
